We at ReflectON leave no stone unturned when it comes to professional detailing and protective coatings. A pioneering group that has many firsts added to its name, revolutionizes protective coatings through application of Hybrid Coatings (Only Skilled Applicator in Bangalore)

Maxprotect is a brand that offers unmatched protection to your car's surface. Paint, Plastics, Glasses, Wheels, are some of the parts that are protected during the treatment offered at ReflectON Automotive.

With more than 8 years of experience in detailing, Nano protective coatings, we offer high quality detailing, painting and protective coating application services at our store in CV RAMANNAGAR, Bangalore.

INTRODUCING MAXPROTECT NANO RUBBER COATINGS

PATENTED TECHNOLOGY

MaxProtect UNCR is the only Nano Rubber Coating in the World that cures into a Flexible Rubber Membrane onto the applied Surface.

NEXT GENERATION TECHNOLOGY

Doesnt Suffer from issues like the age old Ceramic coatings do. Swirls, Waterspots, Webbing etc are some of the common defects of a Ceramic Coating.

PROFESSIONAL ONLY

Offered only by Approved and thoroughly Trained Professionals at selective Outlets only.

Exclusive at ReflectOn Automotive

RESULTS MATTER

Long Lasting Shine, Outstanding Durability, Deep Gloss, Better Water Repellancy, Stonechip resistant, Swirl Resistant, and more are some of the benefits of a Nano Rubber Coating.

MAXPROTECT WAS FOUNDED TO PROVIDE A WINNING MIXTURE OF PREMIUM QUALITY PRODUCTS AND TECH SUPPORT FOR THE PROFESSIONAL CAR DETAILING INDUSTRY.

Maxprotect UNC-R is the world's first Nano Coating that turns into a Rubber Membrane when cured in room temperature. This flexible nature enables the finish to be ultra-resistant to wash swirl mark build-up* and does not suffer from hard water spotting like some Nano Glass Coatings do. Incredibly glossy, super smooth and easy to clean surface is what UNC-R is all about! Same as our Nano Glass Coatings, UNC-R is a permanent coating and can only be removed with sand paper once fully cured. Has extremely high chemical resistance (Salt, Acid, Brake Dust, Exhaust Gasses, Tree-Sap, etc.) and high UV filtering properties.

SELF - HEALING PREMIUM PAINT PROTECTION FILM

"A transparent protection to avoid the damage caused by rocks, salt, insects, and other road debris."

SELF HEALING-PAINT PROTECTION FILMS

Paint Protection Film or PPF was initially conceived and developed by the US Military as a way to protect Helicopter rotors and other sensitive parts from debris and other intrusions. The thick film was applied on leading edges and potential impact areas, designed to be hard wearing and easily replaced in an environment where aesthetics was far from a necessity. As with so many modern-day applications what started as military technology eventually found its way in to the commercial sector and over several decades has slowly developed into various products we have today protecting our cars.

BENEFITS OF PAINT PROTECTION FILMS

PROTECTION

Our PPF protects your paintwork from chips, minor scuffs and scratches, environmental factors such as bug splatter and protects the finish against defects from poor washing techniques.

ENHANCEMENT

Our PPF has a superior optical clarity and is very easy to maintain. When looked after correctly it gives a depth of shine like freshly detailed paint for many years.

SELF-HEALING:

The PPF we offer has an instant self-healing layer and is by itself a self-healing layer. Stone-chips, scuffs, scratches, and swirls that don't penetrate this layer, if it does, it disappears with the application of heat either by the sun or by using a heat gun. On the other hand, we also offer instant self-healing films that will instantly heal even without the application of heat.

TYPES OF PAINT PROTECTION FILMS

SELF-HEALING

All paint protection films that we offer have a basic self healing ability that heals any scratches or swirls that occur on the surface with additional heat given either by parking out in the sun or by applying any artificial heat source. The films also consist of a hydrophobic layer when manufactured.

INSTANT-HEALING

All our premium paint protection films that we offer have an exclusive instant healing ability that heals immediately once a scratch or swirl occurs on the surface. these films have comparatively greater optical clarity and these films also have a hydrophobic layer on top as a standard.

COLORLED PPF

We do offer a colored paint protection film which is mainly black and can give any vehicle a more sporty appearance. these films do have a self-healing ability and comes with a hydrophobic layer on top as standard. Commonly applied on roofs, bonnets, etc

VINYL WRAPS

Vinyl wrapping is a process designed to protect your car's paint and provide a wide range of customization options. Vinyl is a thin film that is applied over the paint of your car. Think of it like a giant decal. You've probably encountered a vehicle with a vinyl wrap of some sort, even if you didn't realize it. Many new cars are offered with some clear protective film applied to the front bumper and leading edge of the hood. The film offers a protective barrier against rocks and other debris that the front of the vehicle is subjected to on a regular basis. It keeps the paint underneath from taking the brunt of the impact and keeps the car looking newer, longer. A vinyl wrap takes the same concept and applies it to the entire vehicle. Instead of wrapping just the front of the car, you wrap the whole car. You're not limited to clear protective films, either. Companies have developed a wide range of coloured vinyl, offered in a large number of finishes, to give you virtually unlimited options when it comes to the exterior of your car.

BENEFITS OF VINYL WRAPS

LOW COST

The cost of a vinyl wrap is one of its most appealing features. Compared to a quality paint job, a full vehicle wrap will cost a fraction of the price.

PEELABLE

If you decide you want to go back to the original paint, or a whole new color, the vinyl can be easily removed and replaced. This allows you to change the look of your car more often.

PROTECTS YOUR PAINT

Wrapping your car with vinyl also provides protection for your original paint. When it comes time to sell your car, you can remove the vinyl to reveal the pristine paint underneath.

MINIMAL DOWNTIME

Painting a car is a big job. From the prep work, to priming, to the dry time in between coats of paint, it all adds up to cost, time, effort and tests your patience. If you choose to repaint your car, it can take several days or even weeks to complete depending on the quality and complexity of the job. Vinyl offers a much faster turnaround time. Making sure the car is clean and a design has been finalized are the major prep tasks. Installing the wrap on the vehicle can be done in a day or two.

SPRAY PAINTING

Spray painting, dent removal, tinkering & collision repair for cars and motorcycles. We use genuine brands & offer a perfect color match for your car or motorcycle.

PERFECT SHADE MATCH

With years of experience in color prep works, we use factory paint codes to ensure that the shade is matched 100%

PRECISION FINISH

With the use of high grade equipment like DevilBiss, Iwata, Sata, 3M, Festool, Mirka, we ensure that the finish is unmatched and the result durable.

GENUINE BRANDS

Quality finish occurs only when a genuine and a high grade material is used. We use brands like Standox, Glasurit, DuPont, Sikkens, Akzo Nobel, PPG, etc.

CUSTOM SHADES

Not just paint matching, we specialize in creating unique blend of tinted shades that can offer uniqueness to your vehicle.
